## PASSIVE SONIC DETECTOR PSD 100

The *Audio Sentry Passive Sonic Detector* is a completely self-contained, solid state device that detects intrusion by selectively detecting the sound of forcible breaking and entering, while ignoring the ambient sounds of normal environment.

Eliminates the high cost of installing individual window bugs and foil. More effective than most "motion" detectors because the PSD-100 detects vandalism from a breaking and entering as it occurs - NOT AFTER! Gives alarm before entry!

### TYPICAL USES:

- Where Glass Breakage Detection is required. Eliminates the high cost of installing individual window bugs and foil.
- Burglary Detection and Personnel Safety.
- More Cost Effective than most "Motion" Detectors and less prone to false alarms.
- Detects Forcible Entry into vehicles and marine vessels.
- Operates in Much Lower Temperature environments where other detectors false or fail.
- Attractive Cover makes it ideal for homes and offices as well as business and school buildings.
- As Back-up or Stand Alone Listen-in verification for central station's digital communications or proprietary post personnel.

### FEATURES:

- Cost Effective Security
- Programmable Pulse Count
- Programmable Response
- Adjustable Sensitivity
- Supervised
- True Digital Response
- Dual LED Indicators
- Low Power Consumption
- Listen-In Capabilities
- Compatible with 6 or 12 volt Control Panel and most Manufacturers Digital Communicators
- Improved Listening Fidelity-other sound Discriminators
- Self-Resetting
- Recessed Mounting
